## Below floor level

The Ponybench BT Plus is the hidden mini bench that allows you to make the most of the space inside of the collision repair facility.

When it's not in use, the Ponybench BT Plus disappears into the floor entirely, allowing the area to be used for vehicles in other phases of the repair process.

Sturdy and compact, it occupies very little space inside the collision repair facility.

## Lifting and repairing small and medium damage

Fast and efficient multi-purpose bench with a capacity of 3000kg, making it suitable for most types of vehicles.

Designed to be used as lift or a bench in order to quickly repair small and medium damage. Incorporate the Touch electronic system to allow increased repair efficiencies and improved accuracy to OEM specifications.

Ponybench BT Plus can be used to: **Lift**
